Anchor is pleased to announce the opening of our new office 'east of the mountains' in Washington that reflects our growing client base. In this region, we currently support irrigation and conservation districts, public utility districts, agencies, counties and cities with water resource and habitat restoration issues.

Some of our project work includes:

- Water resources planning and engineering
- Water conservation planning & irrigation system design
- Water supply and water rights
- Habitat restoration and mitigation planning
- Hydrology and hydraulics
- Fish passage engineering
- Permitting and regulatory assistance

Anchor is currently designing a fish habitat restoration project in the lower portion of the Chelan River. Our team of engineers, fluvial geomorphologists, and biologists are applying state-of-the-art techniques for channel design and river restoration to restore spawning and rearing habitat for Chinook salmon and steelhead. The design will provide 3 acres of restored fish habitat in the river and powerhouse tailrace.

The Wenatchee office is led by Carl Stivers, a senior scientist at Anchor who specializes in water resource and sediment issues. Carl works closely with Bob Montgomery, who joined Anchor last fall as part of our merger with Montgomery Water Group. You may reach Carl at cstivers@anchorenv.com or 509.888.2070, and Bob at rmontgomery@anchorenv.com or 425.827.3243.

Anchor Wenatchee | 23 South Wenatchee Avenue, Suite 120 | Wenatchee, WA 98801-2242
